

ST LMi 30 cm Schmidt Cassegrain and unfiltered MX916 CCD

Average magnitude, from 02:30 to 04:30 UTC, is 17.5. Large scatter outside these times is due to high sky background.

Flux is plotted on a linear scale, owing to the faintness of the target. A 15.1 magnitude comparison star is 1.00 on this scale. Error bars are 1σ .

Check star (c relative to a):
